

ADVANCING DIABETIC FOOT CARE IN NATIVE COMMUNITIES

Reduce Diabetic Foot Complications with a 15-Minute Daily Circulation Therapy

THE CHALLENGE

- ✓ Chronic foot ulcers
- ✓ Preventable amputations
- ✓ Increased care costs and patient burden

Tribal health systems are often left managing these complications after they escalate—placing strain on providers, budgets, and patient outcomes.

THE SOLUTION

A simple, FDA 510(k)-cleared therapy supporting circulation, enabling proactive care—before complications occur.

HOW IT WORKS

-  **EMS** (Electrical Muscle Stimulation)
Activates the body's natural muscle pump to improve circulation in the lower extremities
-  **TENS** (Transcutaneous Electrical Nerve Stimulation)
Helps reduce pain signals and improve patient discomfort
